This paper presents an empirical study to investigate the effect of conflict management strategies on development of cooperative culture in one of Iranian auto industries. The proposed study adopts a Putnam and Wilson’s questionnaire (1982) [Putnam, L. L., & Wilson, C. E. (1982). Communication strategies in organizational conflicts: Reliability and validity of a measurement scale. Communication Yearbook, 6, 629-652.] for measuring different components of conflict management. In addition, the study also designs a questionnaire for measuring cooperative culture. Cronbach alphas are calculated for conflict management and cooperative cultures as 0.76 and 0.79, respectively. Using Spearman correlation ratio as well as regression technique, the study has determined that three components of conflict management strategies including cooperation, competition and compromise could significantly contribute of development of cooperative culture.

1. Introduction

Conflict in any society reduces efficiency and there are many studies to reduce any existing conflict as much as possible. Research investigating the effect of culture on conflict management and resolution behaviors has indicated that individualism and collectivism may impact a person's style of conflict resolution behavior (Thomas, 1992). However, these findings have not been linked to the associated constructs of vertical and horizontal individualism and collectivism as defined by Triandis (1994), which build the concept of accepting authority. Some studies indicate the existence of a strong parallel between the vertical and horizontal dimensions of individualism and collectivism and power distance (Kaushal & Kwantes, 2006). The salience of this power variable could be different

from one culture to another, and impacts not only the nature of the conflict process itself, but also the conflict resolution strategies adopted. Kaushal and Kwantes (2006), for instance, investigated the role of culture and personality in choice of conflict management strategy. Prenzel and Vanclay (2014) investigated the contribution of the methodological approach implemented in social impact assessment (SIA) to conflict management. They considered conflict as a process, which has its own dynamic by conceptualizing the process and highlighting the importance of communication in managing conflict through game theory. They explained the potential use of SIA in preventing, managing and resolving conflict where the focus was on the participatory character of SIA and the role of public media. Mazaheri et al. (2011) studied the effect of pre-existing attitude and conflict management style on customer satisfaction with service recovery and concluded that a cooperative recovery style and exceeding expectations would be necessary to satisfy customers. Lam and Chin (2005) identified and prioritized critical success factors for conflict management in collaborative new product development.

2. The proposed study

The proposed study of this paper investigates the relationship between conflict management strategies on development of cooperative culture in auto industry. The study has been accomplished in one of subsidiaries of Iran Khodro named Tom-Irankhodro. There were 440 employees in this auto industry and the sample size is calculated as follows,

\[ n = \frac{N \times z_{\alpha/2}^2 \times p \times q}{\varepsilon^2 \times (N-1) + z_{\alpha/2}^2 \times p \times q}, \]

where \( N \) is the population size, \( p = 1 - q \) represents the yes/no categories, \( z_{\alpha/2} \) is CDF of normal distribution and finally \( \varepsilon \) is the error term. Since we have \( p = 0.5, z_{\alpha/2} = 1.96 \) and \( N = 440 \), the number of sample size is calculated as \( n = 206 \). The proposed study adopts a Putnam and Wilson’s questionnaire (1982) for measuring different components of conflict management. In addition, the study designs a questionnaire for measuring cooperative culture. There are five hypotheses associated with the proposed study of this paper as follows,

1. Competition strategy influences on cooperative management, significantly.
2. Prevention strategy influences on cooperative management, significantly.
3. Compromise strategy influences on cooperative management, significantly.
4. Compatibility strategy influences on cooperative management, significantly.
5. Cooperation strategy influences on cooperative management, significantly.

The proposed study uses Cronbach alphas to validate the overall questionnaires and Cronbach alphas are calculated for conflict management and cooperative cultures as 0.76 and 0.79, respectively, which are well above the minimum acceptable levels. Fig. 1 demonstrates the summary of the proposed study of this paper.

![Fig. 1. The proposed study](image-url)
The proposed study has applied Kolmogorov-Smirnov in order to understand whether the data are normally distributed or not and the results did not confirm the normality of the data. Therefore, we use Spearman correlation test to examine the relationship between different components of the survey.

2.1. Personal characteristics of the participants

In our survey, 22.1% of the participants were female and 77.9% of them were male. In terms of their job characteristics, 12.6% of them were middle-level managers and 87.4% of them were regular staff. Fig. 2 shows other characteristics of the participants.

![Fig. 2. Personal characteristics of the participants](image)

As we can observe from the results of Fig. 2, most participants were middle age, they have some university education and most of them have good job experiences.

3. The results

In this section, we present details of our findings on testing the effects of five conflict management strategies on development of cooperative culture.

### Table 1

The summary of Spearman correlation between organizational conflict and cooperative culture

<table>
<thead>
<tr>
<th>Hypothesis</th>
<th>The relationship</th>
<th>r</th>
<th>Sig.</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Competition strategy and cooperative culture</td>
<td>-0.304</td>
<td>0.004</td>
<td>Confirmed</td>
</tr>
<tr>
<td>2</td>
<td>Prevention strategy and cooperative culture</td>
<td>-0.271</td>
<td>0.001</td>
<td>Confirmed</td>
</tr>
<tr>
<td>3</td>
<td>Compromise strategy and cooperative culture</td>
<td>0.185</td>
<td>0.001</td>
<td>Confirmed</td>
</tr>
<tr>
<td>4</td>
<td>Compatibility strategy and cooperative culture</td>
<td>0.236</td>
<td>0.023</td>
<td>Confirmed</td>
</tr>
<tr>
<td>5</td>
<td>Cooperation strategy and cooperative culture</td>
<td>0.312</td>
<td>0.001</td>
<td>Confirmed</td>
</tr>
</tbody>
</table>

The results of Table 1 show that competition strategy maintains negative correlations with cooperative culture ($r=-0.304$, Sig. = 0.004), preventional strategy ($r=-0.271$, Sig. = 0.001). However, compromise strategy has positive and meaningful relationship with cooperative culture ($r=0.185$, Sig. = 0.001). There is also a positive and meaningful relationship between compatibility strategy and cooperative culture ($r=0.236$, Sig. = 0.023). Finally, the the implementation of Spearman correlation has indicated a positive and meaningful relationship between cooperation strategy and cooperative culture where cooperative culture is dependent variable and organizational conflict components are as independent variables and the results are summarized in Table 2 as follows,
Table 2
The summary of stepwise regression model

<table>
<thead>
<tr>
<th>Variables</th>
<th>Coefficient</th>
<th>Standard error</th>
<th>Standard coefficient</th>
<th>t-value</th>
<th>Sig.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intercept</td>
<td>65.192</td>
<td>3.649</td>
<td></td>
<td>19.948</td>
<td>0.000</td>
</tr>
<tr>
<td>Cooperation strategy</td>
<td>0.511</td>
<td>0.186</td>
<td>0.295</td>
<td>3.451</td>
<td>0.002</td>
</tr>
<tr>
<td>Competition strategy</td>
<td>-0.409</td>
<td>0.130</td>
<td>-0.204</td>
<td>-2.127</td>
<td>0.009</td>
</tr>
<tr>
<td>Compromise strategy</td>
<td>0.473</td>
<td>0.162</td>
<td>0.271</td>
<td>3.839</td>
<td>0.001</td>
</tr>
</tbody>
</table>

The results of Table 2 indicate that development of cooperative culture has positive relationship with cooperation strategy ($\beta = 0.51$), compromise strategy ($\beta = 0.473$). In addition, the results indicate a negative and meaningful relationship between development of cooperative culture and competition strategy ($\beta = -0.409$). However, the implementation of the regression analysis did not confirm the relationship between prevention and development of cooperative culture.

4. Conclusion

In this paper, we have presented an empirical investigation to study the effect of conflict management on development of cooperative culture in Iranian auto-industry. The study has applied standard questionnaire for measuring conflict management and developed a questionnaire for measuring cooperative culture. The results of Spearman correlation test have indicated that competition strategy maintained negative correlations with cooperative culture and preventional strategy. However, compromise strategy had positive and meaningful relationship with cooperative culture. There was also a positive and meaningful relationship between compatibility strategy and cooperative culture. The implementation of Spearman correlation has also indicated a positive and meaningful relationship between cooperation strategy and cooperative culture. The implementation of stepwise regression analysis has also indicated that development of cooperative culture has positive relationship with cooperation strategy and compromise strategy. In addition, the results have also indicated a negative and meaningful relationship between development of cooperative culture and competition strategy. However, the analysis did not confirm the relationship between prevention and development of cooperative culture.
